Dear Sir or Madam,

1. The SMA 905 connector definition is mechanical specification only and optical considerations are exempted. Therefore the laser and/or the fibre may be damaged by optical mismatch and laser overshoot when using Sphinx, Sphinx jr. or a RevoLix laser with non approved laser fibre.

2. The manufacturer's warranty by LISA laser products on the laser is void if the laser is used with any not approved laser fibre or applicator.

3. All medical laser products manufactured by LISA laser products carry a CE mark which comprises a system consisting of the laser and ist applications (handpieces and fibres). By using third party fibres which are not approved by LISA laser products the CE mark of the laser product and the manufacturer's product liability is void.

4. Laser fibres manufactured by Cook Inc. and Boston Scientific Cooperation are incompatible and not approved for Sphinx, Sphinx jr. and RevoLix lasers.

Kind regards,

Dr. H.-O. Teichmann
